

SUB-SOILER

The Besler Sub-soiler is designed to help recapture productivity lost to soil compaction. Built tough to deliver exceptional results even under the most demanding conditions, the Besler Sub-soiler will effectively break up hard pan and reduce soil compaction while minimizing the introduction of clods or slicks. Some degree of compaction results from every farming task. The Besler Sub-soiler will help reduce run off resulting in the retention of expensive chemicals, fertilizer and irreplaceable top soil.
